----------------	----------

The first digital measuring unit for determining the ring size

Certain things cannot be changed. But we can improve them.

- competent customer service
- measures all international standards, half and full sizes
- easy to operate
- time-saving

The measuring results are indicated by digital display. For the indication of the measuring results, you can choose one of the six most frequently used measuring norms in the world: "Europe Standard": diameter (mm) and circumference of the finger (mm); France; UK; USA; Japan: diameter indicated in the measuring unit used in the respective country.

Power supply by standard batteries or accumulators. The low energy consumption and the automatic switch-off during idle phases guarantee a long service life of the batteries.

The first digital unit world-wide for the measuring ring size is now available. With the Ringmeter any user can determine the exact circumference of a finger in just one simple measurement. Repeated tryings - often by forcing fingers in too small steel rings - belong to the past. In a comfortable and exact way the circumference of the finger is determined by slight pressure at the widest point. By measuring at different parts of the finger variations of the circumference caused e.g. by temperature changes can be found quickly and easily, all in one measuring step. A particular advantage when handicraft solutions are required, such as a spring or a ball in the inner rail.

The unit is highly user-friendly. Every international ring dimension standards can be selected by push button. The ergonomic design of the unit is for both left- and right handed users and can be operated single-handed. The Elma Ringmeter facilitates the exact and quick determination of the correct ring size. Even the measuring of the correct size for bomb-shaped, hollow or exceptionally wide rings is no problem. For people with diseases of the joints unnecessary pain during the measuring is avoided.

Elma Ringmeter – an exact, modern and comfortable method of determining the finger size of your customers.

Technical data

Measuring range diameter (mm)	13 – 26	Weight incl. battery (gr)	175 (+ unit rest 230)
Power supply	9 V battery / accu	Material housing	plastic
External dimensions W / D / H (mm)	57 / 235 / 63	CE-compliant	√
