The universal watch cleaning machine for cleaning and drying

Fully automated watch cleaning machine for the cleaning of disassembled and assembled watch works. Two perfected cleaning systems are combined in one machine: The cleaning of assembled movements of watches by means of a watch work support and the cleaning of disassembled movements of watches in a perforated basket.

The universal watch cleaning machine for cleaning and drying Automatic watch cleaning machine for the cleaning of assembled and disassembled watch works Two perfected cleaning systems have been combined in one machine: cleaning of assembled watch works in the watch work holder, and cleaning of disassembled watch works in a wire basket. The cleaning intensity is adjusted to the individual cleaning parts by electronically controlled impulse periods. The watch work holder (included in the delivery volume) can hold up to six assembled watch works. It cleans highly efficiently by agitating the fastened watch works quickly in the liquid; the cleaning effect is caused by the reverse current created which can be adjusted steplessly via separate control. As the watch works are fastened to the watch work holder in vertical position, the pivots are additionally agitated inside their bearings (with relaxed main springs) which improves the cleaning effect.

Further product features

- automatic cleaning and drying of up to 6 watch works
- 2 perfected cleaning systems (rotation / vibration) combined in one machine
- stepless speed regulation
- corresponds with all valid safety regulations
- very easy to operate
- movement holder for 6 movements (included in delivery)
- 3 jars (included in delivery)
